

## STARTING POINT

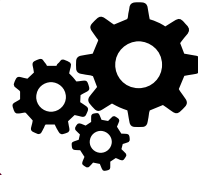

### 01. PLAN

Getting started is the hardest part of a construction project. Lots of questions need to be answered and putting a plan in place can dictate the outcome. GSD has the experience to help develop your project from its earliest stages.

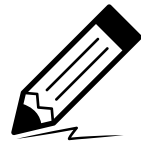

- **Answering questions**
- **Feasibility studies**
- **Site suitability analysis**
- **Assembling a design team**

In our experience, this is the point that can be most stressful in a project timeline, but where GSD Construction truly shines and does its best work. We achieve this by:

- **Leveraging our relationships** with municipalities
- **Taking care of all approvals and permits** while working with our network of trusted subcontractors
- Making sure you not only get **a project on time and on budget**, but an experience that **reinforces a continuing partnership** with GSD Construction.

### 03. BUILD

### 02. DESIGN

Helping realize your vision for your project is a keystone for building something great. At this point, the ideas in your mind start to take shape on paper. GSD will work with your design team to help:

- **Translate your vision into real dollars and cents**
- **Translate your design into a budget and schedule** that is **practical and realistic**, so you don't end up wasting time and money

### 04. DELIVER

The best part of any construction process is when it is finally over. Our end goal is never about profit maximization and ultimately about:

- **Finishing up on the details**
- **Celebrating with you**, as you complete your project
- **Building a relationship** that makes you a happy customer

## FINISH POINT
